

# TSKS13 WIRELESS COMMUNICATIONS

## VT117

### Weighing of the contents of the course book

The numbers in the text mean the following:

**4: Very important paragraph for the course**

This means that the contents of the paragraph should be mastered well by the student. Basic understanding of the paragraph is required. The student should be able to apply the results for the solution of relevant problems.

**3: Important paragraph**

Is often basis for paragraphs with weight 4. The student is supposed to understand descriptions and expressions. The student should be able to apply the results for the solution of some simple problems.

**2: Outline paragraph**

Tested only by short answer questions.

**1: Informational paragraph**

**0: Not included**

### Principles of Wireless Communications

#### 1 Introduction

1.1 Radio Communications -- Then and Now	2
1.2 Communication Systems	
1.2.1 Communication Data Link Systems	2
1.2.2 Network layer models	2
1.3 Radio Communication Systems	2
1.4 Managing the Radio Spectrum	
1.4.1 Standardization Organizations	1
1.5 Overview of Radio Systems	
1.5.1 Radio Services	2
1.5.2 Typical Properties of the Frequency Bands	

3

#### 2 Propagation

2.1 Electromagnetic Fields -- Fundamentals	
--	--

2

2.2 Propagation -- Basic Principles	
-------------------------------------	--

2.2.1 Propagation Mechanisms	3
2.2.2 Reflection	3
2.2.3 Diffraction	3
2.2.4 Scattering	3
2.3 Tropospheric Propagation	
2.3.1 Refraction in Normal Atmosphere	2
2.3.2 The Laws of Refraction	3
2.3.3 Microwave Link Path	3
2.3.4 Tropospheric Phenomena	1
2.4 Ionospheric Propagation	
2.4.1 The Ionosphere	2
2.4.2 Propagation under Normal Ionospheric Conditions	2
2.4.3 Prediction of Ionospheric Links	2
2.5 Propagation Modelling	
2.5.1 Basic Principles	2
2.5.2 Macrocells Models	3
2.5.3 Microcells Models	3
2.5.4 Indoor Models	3
Problems	

### 3 Wireless Link Design

3.1 Radio Receiver Design	
3.1.1 Software Radios	2
3.1.2 Radio Transmitter Design	1
3.2 Antenna Design	
3.2.1 The Antenna as an Electrical Component	2
3.2.2 The EM-Field around the Antenna	3
3.2.3 Some Simple Antenna Types	2
3.2.4 Directional Antennas	2
3.3 Channel Modelling	3
3.4 Time-Invariant Channel Models	3
3.5 Time-Variant Channel Models	3
3.6 Stochastic Channel Models	
3.6.1 Correlation Properties	4
3.6.2 Fading Channel Distorsion	3
3.7 Properties of Flat Fading Signals	3
3.8 Channel Models for Mobile Radio Systems	
3.8.1 Slowly, Flat Fading	3
3.8.2 Shadowing	3
3.9 Link Budget Calculations	
3.9.1 Additive Noise	2
3.9.2 Noise Power	4
3.9.3 Link Budgets	4
3.10 Fade Margin and Time Availability	3
Problems	

### 4 Data Transmission over Radio Channels

4.1 Introduction	2
------------------	---

4.2 Digital Modulated Signals on AWGN Channels	
4.2.1 Coherent Detection	3
4.2.2 Non-coherent Detection	3
4.2.3 Power Spectral Density of Digitally Modulated Signals	3
4.3 Linear Modulation Techniques	
4.3.1 Spectral Properties of Linearly Modulated Signals	2
4.3.2 Amplitude Modulation	2
4.3.3 Coherent Phase Shift Keying	2
4.3.4 Differential Phase Shift Keying	2
4.4 Non-Linear Modulation Techniques	
4.4.1 Coherent Frequency Shift Keying	2
4.4.2 Continuous Phase Frequency Shift Keying	2
4.4.3 Continuous Phase Modulation	2
4.4.4 Non-Coherent Frequency Shift Keying	2
4.5 Data Transmission over Flat Fading Channels	
4.5.1 Slowly Flat Fading Channels	3
4.5.2 Fast Flat Fading Channels	3
4.6 Data Transmission over Frequency Selective Fading Channels	
4.6.1 Channel Model of Frequency Selective Fading	1
4.6.2 Linear Equalization Techniques	1
4.6.3 Nonlinear Equalization Techniques	1
4.7 Orthogonal Frequency Division Multiplexing	
4.7.1 OFDM Signals on AWGN Channels	4
4.7.2 Spectral Properties of OFDM Signals	4
4.7.3 OFDM Signals over Fading Multi-path Channels	4
4.7.4 Discrete Representation of OFDM Signals	4
4.8 Spread Spectrum Modulation	
4.8.1 Direct Sequence Spread Spectrum Modulation	4
4.8.2 Frequency Hop Spread Spectrum Modulation	3
4.8.3 Time Hop Spread Spectrum Modulation	3
4.8.4 Multi-Carrier Spread Spectrum Modulation	2
Problems	

## 5 Diversity Systems

5.1 Principle of Diversity	3
5.2 Microscopic Diversity Methods	3
5.3 Combining Methods	
5.3.1 Selection Combining	4
5.3.2 Maximal Ratio Combining	4
5.3.3 Equal Gain Combining	3
5.3.4 Switched Combining	3
5.4 Practical Limitations of Diversity Systems	
5.4.1 Pre-detection and Post-detection Combining	2
5.4.2 Correlated Branch Signals	3
5.4.3 The Effects of Correlated Noise	3
5.5 Bit Error Performance of Diversity Systems	
5.5.1 Maximal Ratio Combining	4
5.5.2 Selection Combining	3
5.5.3 Switched Combining	2

5.6 Spatial Multiplexing	
5.6.1 Multiple Antenna Systems	1
5.6.2 Space-Time Coding Systems	1
Problems	

## **6 Error Control Coding for the Radio Channel**

6.1 Discrete Channel Models	
6.1.1 Memoryless Channels	2
6.1.2 Models for Burst Error Channels	3
6.2 Block Codes	
6.2.1 Basic Properties	3
6.2.2 Distance Properties	2
6.2.3 Types of Block Codes	1
6.2.4 Decoding of Block Codes	1
6.3 Convolutional Codes	
6.3.1 Basic Properties	3
6.3.2 Decoding of Convolutional Codes	2
6.3.3 Performance in AWGN Channels	2
6.4 Coding Methods for Fading Channels	
6.4.1 Coding and Interleaving	4
6.4.2 FEC Schemes with Full Interleaving	3
6.4.3 Concatenated Codes	2
6.4.4 Parallel Concatenated Convolutional Codes	3
6.5 Coded Modulation Techniques	
6.5.1 Design of Trellis Coded Modulation	3
6.5.2 Performance of TCM Codes on AWGN Channels	2
6.5.3 Performance of TCM Codes on Fading Channels	2
Problems	

## **7 Multi-User Communications**

7.1 Background and Definitions	2
7.2 Signal Set Design in Multi-User Systems	3
7.3 Orthogonal Multiple Access Systems	
7.3.1 Frequency Division Multiple Access Systems	2
7.3.2 Time Division Multiple Access Systems	2
7.3.3 OFDMA Systems	3
7.4 Spread-Spectrum Multiple Access Systems	
7.4.1 Frequency Hop-CDMA Systems	3
7.4.2 Direct Sequence-CDMA Systems	4
Problems	

## **8 Wireless Packet Transmission**

8.1 Introduction	2
8.2 Wireless link transmission	
8.2.1 Basic Properties	2
8.2.2 Basic ARQ Schemes	4

8.2.3 Undetected Error Performance of ARQ Systems	
2	
8.2.4 ARQ Systems for Burst Error Channels	2
8.2.5 Comparison between ARQ and FEC System	2
8.2.6 Type I Hybrid FEC/ARQ Schemes	2
8.2.7 Type II Hybrid FEC/ARQ Schemes	2
8.3 Wireless Access Protocols	
8.3.1 Wireless Access Models	2
8.3.2 The ALOHA-Algorithm	4
8.3.3 Power Capture	0
8.3.4 Carrier Sense Multiple Access (CSMA)	
2	
8.4 Some packet access examples	1
Problems	

## **9 Wireless Networks**

9.1 Basic Concepts	4
9.2 Spectrum reuse fundamentals	4
9.3 Cellular Networks	
9.3.1 Basic Concepts	4
9.3.2 Refined Capacity Analysis	2
9.3.3 Directional Antennas in Cellular Networks	1
9.3.4 Non-Blocking Systems	1
9.4 Spread spectrum cellular systems	
9.4.1 Frequency Hopping	0
9.4.2 CDMA systems	0
Problems
